## DIGITAL NAVIGATION SYSTEMS

From Professionals to Professionals

## One Ocean: Navigating the Future of Digital Shipping

As a key partner in maritime digitalization, One Ocean LR offers cutting-edge solutions designed to streamline shipping operations, improve compliance, and enhance environmental sustainability.

## NAVTOR: Easy transition to digital navigation

NAVTOR is today one of the main reference points for the global electronic navigation market. Its NavStation platform integrates in a single tool all the software and functions needed for voyage planning and active navigation control.

## C-MAP: Accurate worldwide charts and expertise

C-MAP is one of the first commercial brands to enter the digital cartography market. It is still the only brand in the world to be able to include among its solutions for ECDIS (Electronic Chart Display and Information System), both the official ENC (Electronic Navigational Chart) and the unofficial cartography named "Professional+".

## TimeZero: A full marine navigation software solution for recreational boats

TIMEZERO is one of the first brands in the recreational, fishing, large yacht and traffic monitoring markets to offer customisable chart software (ECS – Electronic Chart System) that can be used on any platform (PC, laptop, tablet or mobile).

## Admiralty: UKHO Maritime Data Solutions

The UK Hydrographic Office (UKHO) is the world leader in hydrography and has historically specialised in surveying and mapping the morphological characteristics of the seas around the globe. It processes a huge amount of data which it makes available to digital navigation products.

## C&C Marine Sales & Technical team is composed by former deck officers and ship masters only

An expert interlocutor, present 24 hours a day, eager to recommend the most suitable electronic navigation solution for your specific needs.

The e-Navigation Division began its activities in 2002. From the very beginning, we have been dedicated to the rapidly expanding electronic navigation market. In the ten years leading up to the compulsory use of ECDIS – Electronic Chart Display and Information System (2012) – the company developed an intensive business activity in the selection and distribution of ENC (Electronic Navigational Chart) vector charts.

Over the years, our highly specialised staff have continued to develop their know-how by carefully following market trends, studying and selecting the best available products to make them accessible to ship-owning companies, optimising work "on the bridge", shore-side work and administration.

Most of our team is made up of former deck officers and ship masters with extensive experience, also onshore, in ship management companies.

## Our services include onboard previsit, systems installation, familiarization and training activities

C&C Marine e-Navigation Division carries out continuous market analysis to assist customers in selecting and installing the most appropriate software solutions.

It is increasingly difficult to split our technology offering into products and services. Our integrated offer includes continuous market analysis in order to provide ongoing assistance to shipping companies in selecting and installing the best software solutions according to the type of operation, organisation, operational procedure and available budget.

Through ongoing collaboration with the Accademia Italiana della Marina Mercantile (Italian Merchant Shipping Academy) the CMA-Litav Training Centre, Ente Radar Genova, Navimeteo and the Istituto Idrografico della Marina (Navy Hydrographic Office), we train onboard staff through a highly developed training programme.
